

The impacts of minimum wage on employers' employment strategies and employees' behaviour in Malaysia's hospitality industry: A pitch

Kun Hing Yong ^{a,1}

^a *University of Queensland, Australia*

Abstract: This pitch letter summarizes my personal reflections of employing the pitching research template created by Faff (2015, 2018) to my PhD research topic. It explains how the template guides the author to articulate and conceptualize a research idea critically, clearly, systematically and effectively. Specifically, this letter positively supports the use of the pitching research template, in particular for new PhD student or novice researcher during their early stage of research process.

Keywords: Pitching research; minimum wage; employment strategies; employees' behavior; hospitality

JEL codes: J21; J38; L83

1. Introduction

This letter deliberates about my personal experience of employing the pitching research template developed by Faff (2018) to my PhD research topic – “The impacts of minimum wage on employers' employment strategies and employees' behavior in Malaysia's hospitality industry”. I am currently a first year full-time PhD student enrolled in January, 2018 at the Business School, University of Queensland (UQ). At the initial stage of my PhD program, the process of searching and identifying an

ideal research topic was tough, and I felt like looking for a needle in a haystack. Fortunately, my both supervisors, Associate Professor Richard Robinson and Associate Professor David Solnet encouraged me to enroll the PhD Course "The Research Process in Business"-RBUS6914 in the second term of year 2018. I felt honored when I was introduced to the pitching research template by the template creator himself- Professor Robert Faff or 'Pitch Doctor', during the RBU6914 course. Importantly, being a new PhD student, the template has guided me into a more systematic way of organizing and evaluating, articulating and arguing, and re-shaping my research plan. Indeed, at the end of this course, I absolutely agree with both of my supervisors' opinion that this course is like a "brick and mortar" to the foundation for my PhD thesis. As the course is structured in a way for PhD students to acquaint themselves in a research environment, and to develop their skills to find a topic for preparing their PhD candidature confirmation's document and also publication.

The remainder of this letter will be presented as follows: Section 2 offers a brief review on the utilization of the pitch template. Section 3 deliberates on the reflections of my pitch template application, and Section 4, concludes with my thoughts on this pitching process.

2. Brief review on the application of the pitch template

The completed pitching research template developed by Faff (2018) is appended as Appendix 1, presents a simple but clear, informative, systematic and structure to my research topic about "The impacts of minimum wage on employers' employment strategies and employees' behavior in Malaysia's hospitality industry". Interestingly, like many other pitching research template users (Brenner, 2016; Rad, 2016), my completion of the template does not follow the sequence as structured in the pitching research template. My research *motivation/puzzle* in Item (D) is sparked by the importance of the relatively new event (minimum wage in Malaysia's context) to the research. The appropriate timing to assess the outcome, and the research gap in the literature. Hot debates arise regarding the impacts or potential impacts to business activities following implementation of the Malaysia's Minimum Wage Order 2012 (referred to national minimum wage policy hereafter), incremented in 2016 and the latest scheduled hike in early 2019. The minimum wage hike is anticipated to exert a significant impact on competitiveness of business activities and the labor market. As the national minimum wage policy is considered relatively recent, lack of empirical research has been conducted in this field in the Malaysian context. Furthermore, it would be timely to evaluate the outcome of the minimum wage policy after a few years of implementation, in particular to what extent the targeted objectives have been achieved.

Consequently, this motivates me to investigate how does the labor-intensive industry such as the hospitality industry, with relatively less room to change production strategy, compare to the manufacturing industry, in regards to the national minimum wage hike. How does incrementing minimum wage affect the employees' behaviors? Finally, to what extent the objectives of the minimum wage policy have been achieved? My passion has led me to the *basic research question* in Item (B), "How does the national minimum wage policy change the employers' employment strategies and employees' behaviors in Malaysia's hospitality industry?" and it has linked to my *working title* in Item (A). The next step is to identify the *key papers* in Item (C) for my research topic. The best way of filtering literature search/reading is the "cocktail glass" approach as suggested by Faff (2015). This approach proposed a wide-ranging literature search/reading and thereafter, narrow down the scope to the most relevant and important literature base. Apparently, key papers can be discerned after we have done devoted reading associated with the research topic. The papers could be influential papers that relate to your research topic or the papers that ably guides you from the theoretical framework perspectives. My key papers (Solnet *et al.*, 2014; Ahmad *et al.*, 2016; Repetti & Roe, 2018) are stated in the pitch research template (see Appendix 1).

The next step is to answer the "3-2-1 countdown" in the pitching research template. The "3" refers to the three core aspects of empirical research project, namely *idea*-Item (E), *data*-Item (F) and *tools*-Item (G). This part encourages you to think deeply and to plan in detail how to conduct the research project. You need to think of the required source of data, the tools and the methodology to be used for the research project. The "2" refers to the *what's new*-Item (H) and *so what*-Item (I). I found out this is the most challenging and the most time-consuming part in the pitching research template. The *what's new* is essential as it inspires you to suggest the novelty of your research and to comprehend the potential contribution of your research. In fact, the "Mickey Mouse" diagram proposed by Faff (2015) is very beneficial as it clearly and effectively presents *what's new* in your research and the novelty of your research. I applied the "Mickey Mouse" diagram in this pitch letter to indicate the *what's new* and novelty of my research topic as shown in Figure 1. The intersection of these three circles represents the novelty of this research in the Malaysian context. The *so what* part challenges you to show why you think that your research is so important? Finally, the "1" refers to the *contribution*-Item (J), the one bottom line of the pitching research template. Generally, if you are able to successfully fill-up the *what's new*-Item (H) and *so what*-Item (I), then you will be able to answer the *contribution*-Item (J). Contribution could be either or both theoretically or/and practically.

3. Reflections of my pitch template application

Like many other new PhD students, at the initial stage of my study, I was overwhelmed with an inundation of information, but yet, I did not know what to do and where to start. Indeed, I have experienced many challenges and difficulty in developing my PhD research plan. Before I attended RBUS6914's class, my mindset was if one was to do a PhD, one should craft ones ideas into a 5-10 page long so called PhD proposal. However, since completing this pitching class, I can confidently say that this experience has been astonishingly invaluable despite challenging. The two-page pitching template invented by Professor Robert Faff is distinctly helpful, friendly structured and concise. The thoughtful and ideally structured template provides key resources, a skeletal framework and systematic guides for any researcher, to identify and create their own the whole research plan. The template is extremely appreciated especially by a novice researcher like me. Specifically, the pitching experience trained me to be more structured in organizing my research plan, to better conceptualize and communicate my research plan in a more succinct and systematic way. Then, it gives me more confident to deliver my research in a seminar or conference setting.

Furthermore, I also learnt from my peers through the presentation sessions of their personal pitching research. It gave me more structure in crafting my personal pitch. Therefore, the pitching research has sharpened my thinking and self-development. Finally, I strongly believe that the pitching process has provided a platform of knowledge and skill to all pitchers to be successful in their research.

4. Conclusion

This pitching research letter summarizes the experience of completing a pitching research template on my PhD research topic. I perceived that this pitching research

template is a great innovation research tool in the academic world. It benefits the pitch template user in the sense that it guides user to go through the research plan, it facilitates effective communication of the core elements of research topic to the targeted audiences in a time saving manner. Given this fact, I agree strongly that this pitching research template should be recommended to new PhD students or novice researchers as it would benefit them, most specifically at the initial stage of their research journey. In addition, I strongly suggest they read the Faff *et al.*'s (2017a; 2017b) fantasy pitching papers to gain more insights and better understanding of how to apply the pitching template.

Appendix 1: Completed pitching research template on "The impacts of minimum wage on employers' employment strategies and employees' behaviour in Malaysia's hospitality industry"

Pitcher's Name	For category	Hospitality	Date Completed
Kun Hing Yong			20 October 2018
(A) Working Title	The impact of the national minimum wage policy on employers' employment strategies and employees' behaviours in hospitality industry.		
(B) Basic Research Question	How does the national minimum wage policy change the employers' employment strategies and employees' behaviours in hospitality industry?		
(C) Key paper(s)	<p>Ahmad, R., Scott, N. & Abdul-Rahman, R. (2016). "Why minimum wage order implementation is a challenge to human resource managers in Langkawi hotels", <i>International Journal of Culture Tourism and Hospitality Research</i>, vol. 10, no.2: 191-204</p> <p>Repetti, T. & Roe, S. (2018) "Minimum wage change effects on restaurant pricing and employment", <i>International Journal of Contemporary Hospitality Management</i>, vol.30, no.3: 1545-1562</p> <p>Solnet, D., Nicksson, D., Robinson, R.N.S. & Kralj, A. & Baum, T. (2014) "Discourse about workforce development in tourism – An analysis of public policy, planning, and implementation in Australia and Scotland: Hot air or making a difference?", <i>Tourism Analysis</i>, vol.19: 609-623</p>		
(D) Motivation/Puzzle	Malaysia's national minimum wage hike (NMW) is anticipated to exert impact on the competitiveness of business activities and the labour market. This has motivated me to investigate how does the labour-intensive hospitality industry response to the NMW hike from both supply and demand side of the labour market.		
THREE			
(E) Idea?	This study will conceptualise employers' hiring strategies and employees' behaviours (dependent variables) in response to the NMW (independent variable) to capture a comprehensive impact. Firstly, examines how employers change their employment strategies following the NMW policy. Secondly, investigates how does the NMW affect the training activity offered by employers in hospitality industry? Thirdly, examines how does the NMW affect the low-wage workers' work commitment and intention to leave in hospitality firms?		
(F) Data?	<p>i) Qualitative data will be obtained through face to face interviews between researcher and employers/managers of hotels.</p> <p>ii) Quantitative data via survey- distribute the questionnaires to the targeting hotel employees. The criteria for the survey participants are low-wage workers and have been working at the particular hotel for 6 months.</p>		
(G) Tools?	NVivo software will be applied to analysis the response from employers, and SPSS software will be adopted to analysis the quantitative data.		
TWO			
(H) What's New?	<p>i. A conceptual framework will be produced by incorporating the key relevant theories into the model.</p> <p>ii. This study focuses on the change of employers' hiring and training strategies in hospitality versus existing studies concentrated on employment and price strategies.</p> <p>iii. Lack of research investigates on how NMW has changed employees' behaviours despite high turnover. This study will investigate from employees' work commitment and turnover intention perspectives.</p>		

(I) So What?	The new conceptual framework is expected to provide a more comprehensive framework to hospitality industry. The examination of employers' employment strategies will show if one of the targets of NMW to reduce hiring of foreign workers is achieved. Lastly, it will offer insights how the NMW affect the employees' attitudes from the angles of work commitment and intention to quit in hospitality industry.
ONE	One bottom line
(J) Contribution?	<ul style="list-style-type: none"> • Theoretical implications: <ol style="list-style-type: none"> 1. This will be the first paper that investigates minimum wage responses from both employers' employment strategies and employees' attitudes, in particular, from the developing country context. • Practical implication: <ol style="list-style-type: none"> 1. The findings can be used by policy-makers in assessing to what extent the aims of minimum wage policy have achieved and it also offer insights for future policy implication.
(K) Other Considerations	<ul style="list-style-type: none"> -To seek collaboration and support from government authorities. -Ethic clearance: This research will involve employers, employees and also government policy. Therefore, the respondents have freedom to opt out of the interview or answer the questions. -Low obsolescence risk: since minimum wage debate is still ongoing.
